German - Pre-Intermediate

ABOUT ME

I am a junior web developer looking for a full-time job. I have experience working in a team as well as independently on large projects. For me constant development, gaining practical experience and knowledge is the most important thing. I never force myself to do web development - it's both a job and a very interesting hobby for me, which I get a lot of pleasure from. I hope to find a team that will take me into their family of web developers, where I can continue to learn new things, work and help others.

EXPERIENCE

Project name: Game Library — PixelPACK

Project role: Front-end Developer

Project period: 6 Sep. 2022 — 14 Oct. 2022

Below the link on GitHub, you can see my final project in the JavaScript course. My web application is called PixelPACK - a library of 2d games where the user can get acquainted with the library itself, get acquainted with the games, and most importantly, play. When developing the web application I used the main features of JavaScript: AJAX, SVG, CANVAS, EVENTS, when developing the main page and one of the games I used object-oriented approach. I also used the outdated Jquery library to work with AJAX. Also used HTML, SCSS to be displayed on the web page. The web application works on other devices, such as tablets, phones, thanks to adaptive layout and manipulation of media requests using JavaScript.
